

More than just a Garden Centre...

Environmental Policy

Forestry

Wooden products are a large part of our identity at Langlands.

Wood is an excellent material from an environmental and quality point of view.

It is renewable, recyclable and biodegradable.

In our coffee shop wood is also our fuel of choice for heating, as it is carbon neutral.

However for wood to live up to its full environmental potential it must originate from well-managed forests.

Our goal is to source all of the timber products that we sell from manufacturers who use Forestry Stewardship Council certified timber (FSC) by 2012.

While we move towards this target we require all of our suppliers to pledge that none of the wood based products that we sell come from intact natural forests or forests with high conservation values.

This policy will be reviewed and assessed annually
